ON THE PULSE

## AZENIS FK510

HIGH SPEED & WET PERFORMANCE

A new premium tire, worthy of the most ultra of ultra-high performance car, has carved its name on the history of tires. FALKEN's new-generation flagship tire, AZENIS FK510, has arrived.

Newly developed through the evolution of every advanced technology, in pursuit of the ideal shape for road contact. During high-speed cruising on dry roads, it displays a sharper controllability that is brimming with reliability. On wet roads, it balances improved grip performance with excellent stability. It has also inherited all the superior general features of its predecessor model, such as quietness and durability. Honed to the level of a premium tire recognized by the world's best cars.

### TECHNOLOGY

#### TENSION CONTROL TECHNOLOGY

is a proprietary casing mold shape that provides a more flexible middle sidewall area to absorb shock while providing enhanced handling capability via the rigid outside shoulder tread and bead area of the sidewall.

#### 4D NANO DESIGN

features new compound advancements through biomass materials to help improve tread flexibility and adhesion while simultaneously reducing polymer heat generation.

#### NEO-T01

#### NEO-T01,

is an acronym derived in the following manner. 'N', 'E' and 'O' represent the words Next, Elaborate and Orb respectively, and 'T' stands for Taiyo – which means the Sun in Japanese, and also represents technology and tyre.

The digits '01' signify that the said system is the first iteration of Sumitomo's next-gen tyre manufacturing technology.

### TIRE HIGHLIGHTS

#### (ACP) PATTERN DESIGN

provides enhanced tire tread to road surface pressure distribution, improving both directional stability and vehicle-stopping distances.

#### VARIABLE SIPE DEPTH

across the surface of the tread allows for controlled flexibility while maintaining overall block rigidity.

#### HYBRID UNDERTREAD CAP PLY

provides added rigidity and high-speed stability through the use of both aramid and nylon materials.

#### WIDE SHOULDER BLOCKS

enhance high-speed cornering and lateral grip.

#### SWITCHBACK SIPING

helps optimize contact surface while cornering in wet conditions, penetrating the water surface and enhancing cornering performance.

#### FOUR CIRCUMFERENTIAL GROOVES

efficiently disperse water and enhance hydroplane resistance.
